EXPERIENCE

Apr 2026 - Current Mission Viejo, CA	FieldAI Senior Software Engineer - Lead development of dashboard for gas and thermal inspection missions conducted by autonomous robots - Reduce payload size of API that fetches gas readings by over 1000x from ~1mb/s to ~1kb/s
Sep 2025 - Mar 2026 El Segundo, CA	Smack Technologies Product Engineer - Deliver company's first product, which generates predictive ISR plans. Secured a follow-up government contract following its successful demo. - Serve as lead engineer on a fires planning product. Develop the project road map & onboard & manage a team of three software engineers. - Integrate temporal, reducing latency by 6X and adding observability to workflows.
Jan 2020 - Oct 2024 Venice, CA	Google Software Engineer III - Create a self serve tool to reject and backfill feedback from problematic human raters. Used on tens of thousands of feedbacks as part of effort to improve data quality. - Investigate EWOQ billing, resulting in a refactor with table-valued-functions & GoogleSQL tests plus the discovery & fix of a bug in task time computation, resulting in savings of over \$1.2 million a year - Migrate authorization service APIs to support Zanzibar IAM authorization - Develop evaluation details page for third party vendors. - Perform backfill of rater employment records. Develop launch plan, validate changes via SQL queries, and update admin portal to support setting, updating, and validating the new field. - Fix & improve team's latency dashboard by adding filter options & timeseries charts - Migrate EWOQ user details page from GWT to Angular Dart
Sep 2019 - Jan 2020 Santa Monica, CA	Cornerstone OnDemand, Inc Software Engineer - Support in beta release of point-in-time headcount reporting - Add event tracking via Amplitude Analytics to analyze user behavior and improve prioritization of upcoming team projects.

EDUCATION

University of Michigan College of Engineering,
B.S.E. Computer Science
Graduation: April 2015

COMPUTER SKILLS

- Front End Languages & Frameworks:**
HTML, CSS, JavaScript, TypeScript, React, React Three Fiber, Angular, Vue.js, SolidJS, Dart, WebGL, Three.js
- Back End Languages & Frameworks:**
Node.js, GraphQL, C++, Python, Django, Java, PostgreSQL, DynamoDB
- Tools:**
Cursor, Claude Code, Git, Perforce, AWS, Unity3D, Colab, Jira, WordPress, Maya, Adobe Creative Suite
- Other:**
OOP, Design Patterns, Web Dev, Agile Dev, Game Dev, XR, 3D Graphics, Computer Vision, Digital Art

RECENT PROJECTS

- Cubism.js**
- Publish JS library for creating full-screen, 3D scrolling websites, composed of cubes
- Cryptocurrency Bot**
- Run AWS Lambda function to compare cryptocurrency prices across exchanges & text profitable arbitrage opportunities
- Illusion Generator**
- Program python script to generate image morphing optical illusions in Maya by utilizing perspective & linear algebra

INVOLVEMENT

- Hacker Fund (Sep 2015 – Present)**
- Mentor & judge hackathons
 - Organized & ran remote STEAM camp for Compton Unified School District students
 - Received 2021 Volunteer of the Year award
